*Creating motion  
and power motion  
hardware for the  
upholstery industry  
for over 40 years*

Our success is due to our innovation, dedicated employees, and our made in America approach.

We have over 70 patents on various mechanisms and at least a dozen new ideas waiting to be introduced to customers who are interested in developing new products.

*more than  
just furniture hardware*

*Quality Begins Here in  
Denton, North Carolina.*

Ultra-Mek mechanisms go through several quality checks before being put on the sales floor.

Our process begins with Engineering: ideas are drawn and prototypes are made. The prototypes we make are thought well-over, tested, and remade until it stands up to the quality we want to prove.

Our mechanisms are made on punch presses with dies designed and made by Ultra-Mek, Inc.

With a workforce approaching 200 employees, many of whom have been here more than 25 years, we are able to consistently build quality mechanisms for our partner-customers.

Raw materials are purchased from U.S. manufacturers whenever possible. Today, Steve's son, Shane Hoffman, continues to lead Ultra-Mek, keeping the company at the forefront of the furniture industry..

*Let us work together  
to make your  
innovative designs  
become a reality*
